

**IN THE CLAIMS**

1. (Currently amended): A method of filling an order for a consumer right to make copies of a book comprising:
  - (a) affixing a semiconductor device to said book, said semiconductor device storing a record, said record including a plurality of the members of the group consisting of: a title of said book, a web address of a copy tracker for said book, an identity of said order, a first number of copies of said entire book that are permitted to be made by a consumer, a second number of copies of pages of said book that are permitted to be made by said consumer and a third number of copies of pictures of said book that are permitted to be made by said consumer; and
  - (b) notifying a copy tracker that said record has been provided on said book.
2. (Previously presented): The method of claim 1, wherein said record includes at least said web address, and wherein said semiconductor device is provided on a cover of said book.
3. (Previously presented): The method of claim 1, wherein at least a portion of said record is provided on said semiconductor device in machine readable form.
4. (Previously presented): The method of claim 2, wherein said at least one portion of said record includes at least one member of the group consisting of: said web address and said identity.
5. (Previously presented): The method of claim 1, wherein said record includes at least said web address, and wherein said semiconductor device is provided on one or more pages of said book.
6. (Currently amended): A transaction processor for filling an order for a consumer right to make copies of a book comprising:

a semiconductor device affixed to said book having a memory; and an order procedure stored in said memory, wherein said order procedure includes: first means for controlling said semiconductor device to provide a record of said order, wherein said record includes a plurality of members of the group consisting of: a title of said book, a web address of a copy tracker for said book, an identity of said order, a first number of copies of said entire book that are permitted to be made by a consumer, a second number of copies of pages of said book that are permitted to be made by said consumer and a third number of copies of pictures of said book that are permitted to be made by said consumer, and

second means for controlling said semiconductor device to notify a copy tracker when said record has been provided on said book.

7. (Previously presented): The transaction processor of claim 6, wherein said order procedure controls said semiconductor device to provide said web address and said identity of said order on said semiconductor device, and wherein said semiconductor device is provided on a cover of said book.

8. (Previously presented): The transaction processor of claim 7, wherein said web address is in machine readable form.

9. (Previously presented): The transaction processor of claim 6, wherein said order procedure further includes third means for controlling said semiconductor device to also provide said identity of said order on said cover.

10. (Previously presented) The transaction processor of claim 6, wherein said record includes at least said web address and said identity, and wherein said semiconductor device is provided on one or more pages of said book.

11. (Currently amended) A computer-readable medium having computer-executable instructions for performing a method for filling an consumer order for copies, comprising:

providing an affixed semiconductor device storing a record of an order, wherein said record comprises a plurality of members of the group consisting of: a title of said book, a web address of a copy tracker for said book, an identity of said order, a first number of copies of said entire book that are permitted to be made by a consumer, a second number of copies of pages of said book that are permitted to be made by said consumer and a third number of copies of pictures of said book that are permitted to be made by said consumer; and

notifying a copy tracker when said record has been provided on a book by said semiconductor device.

12. (Previously presented): The computer-readable medium of claim 11, further comprising providing said web address and said identity on said semiconductor device, said semiconductor device being disposed on a cover of said book.

13. (Previously presented): The computer-readable medium of claim 12, wherein said affixed semiconductor device is also provided on one or more pages of said book.

14. (Currently amended): A method of a consumer making a copy of one or more pages of a book comprising:

(a) reading a record disposed on said book, wherein said record includes a web address of a copy tracker for said copies of said book;

(b) using said web address to send to said copy tracker a request to make said copy, said request including an identity of a consumer right to make said copies and an identification of said pages;

(c) obtaining from said copy tracker an electronic image of said pages; and

(d) making a human readable image of said electronic image.

15. (Previously presented): The method of claim 14, wherein step (a) reads said web address from a semiconductor device affixed to said book or on a page, picture or other image contained in said book.
16. (Previously presented): The method of claim 15, wherein said human readable image is on a display.
17. (Previously presented): The method of claim 15, wherein said human readable image is on a hard copy media.

43. (Previously presented): The method of claim 1, wherein said record is member of the group consisting of: printed matter, watermark, magnetic record, semiconductor device, and any combination thereof.

44. (Previously presented): The transaction processor of claim 6, wherein said record is member of the group consisting of: printed matter, watermark, magnetic record, semiconductor device, and any combination thereof.

45. (Previously presented): The memory medium of claim 11, wherein said record is member of the group consisting of: printed matter, watermark, magnetic record, semiconductor device, and any combination thereof.

46. (Previously presented): The method of claim 14, wherein said record is a member of the group consisting of: printed matter, watermark, magnetic record, semiconductor device, and any combination thereof.
